

FMAware™

Maintaining Stadium Facilities Safely and Efficiently

FMAware™ is the FSOA's new Computerised Maintenance Management System (CMMS)

Functions:

- Preventative, corrective & conditional maintenance
- Work order and asset management
- Seamless integration with FSAware™ match-day tracking system & other AwareManager™ modules

Benefits:

Improved Return on Assets:

- Preventative - ensure proper maintenance to maximise equipment life
- Conditional - targeted maintenance to optimise resource allocation
- Corrective - track and manage reactive maintenance issues efficiently

Safer Equipment and Stadiums:

- Reduced liability through historical computerised records
- Access to accurate, up-to-date information on all assets from anywhere
- Exception reporting to identify problem situations

Reports and Analysis:

- Flexible report generation with easy integration to Excel
- Better informed decisions - eg: trade-off between cost of breakdown vs cost of pro-active maintenance
- Standardised method of recording faults and categorising issues into one comprehensive history enabling like-for-like comparison

How it works:

An internet accessible hosted system provided by the FSOA and supported by Aware Technology International - Industry leaders in Stadium Management Software

- Proven technology currently managing over 300 million square feet of facilities worldwide
- Simple to use, quick entry data screens
- Secure private access from any computer via internet
- Includes full training and support
