

FSAware™

Making Stadiums Safer

FSAware™ is the FSOA's new computerised match-day tracking system

Functions:

- Pre-match checklists
- Electronic recording of all issues and incidents (including maintenance, lost child, ejection, medical, etc)
- Match-day reports
- End-of-season analysis from ATI

Benefits:

Event Management:

- Demonstrable pro-active approach to safety
- Audit trail and proof of accountability
- Improved risk management through data analysis

Match Day Log:

- Create an historical record of all data and issues for every match
- Standardised method of recording events and categorising issues and incidents enabling like-for-like comparison

Reports and Analysis:

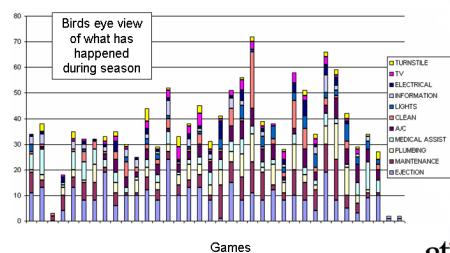

- Generation of incident, match-day and end-of-season reports and graphs
- Ability to compare data with industry averages
- Reduced liability through historical computerised records

How it works:

An internet accessible hosted system provided by the FSOA and supported by Aware Technology International - Industry leaders in Stadium Management Software

- Simple to use, quick entry data screens
- Data entry during match or after-the-fact
- Secure private access from any computer with an internet connection
- Includes full training and support

Main Incident Types by Event
